

Foundatia Technologies™ Disaster Recovery and High Availability Solutions

Ensure the availability of your critical systems and data with Foundatia Technologies Disaster Recovery and High Availability Solutions

Is your company positioned to recover from an unexpected or catastrophic event? Power outages, hardware malfunction, software failures, human error, natural disasters and even criminal acts can pose a risk to your organization. To better protect your organization from these potentially detrimental events, disaster recovery (DR) solutions are a necessity. The cost of preparing for threats and mitigating risk is far less than the cost of attempting to recover from a disaster. A loss in service or data can have huge financial and customer service implications for your business. Our goal is to enable your organization to provide uninterrupted service to your customers and employees, even if disaster does occur.

Foundatia Technologies offers flexible and affordable DR solutions that help ensure quick recovery of critical business data and vital business processes. Designed to reduce cost, complexity and risk to your business, our DR solutions are instrumental in enhancing your overall compliance and control. Additionally, we offer secondary sites that can play a large role in your disaster recovery and high availability strategy. Implementing a secondary data center away from your primary data site minimizes the possibility of both facilities being compromised simultaneously.

Foundatia Technologies is your partner in helping you reduce risk and minimize downtime should disaster happen to strike. Don't wait another minute. Protect your company and ensure your business withstands disaster by putting a disaster recovery and business continuity plan in place today.

Benefits of Foundatia Technologies Disaster Recovery and High Availability Solutions:

- ✓ Timely recovery of critical data
- ✓ Cost-effective solutions bringing your organization back online quickly
- ✓ Implement best practices and extensive experience for recovery across multiple locations
- ✓ Support of compliance requirements for safeguarding sensitive data
